AMSLER GRID

Wear your reading correction if necessary. Position the chart 14 inches away from your face. Test each eye separately. Cover one eye with your hand. Stare at the dot in the center. Do not let your eye drift from the center dot. The entire grid should be visible and intact. None of the lines should appear wavy or bent, and there should be no missing, blurry, or discolored areas. Perform this test every day. Contact our office immediately if you notice any change.
